Doing	Introduction & Contacts	Add Health Professionals	Add Medication	Complete Profile	Last medication taken	Medication Reminder Aler	Snooze	Update medication & Doctor information	Find Doctor in the list	Add Appointment to calendar	Generate Medication and Blood sugar logs	Thinking	Feeling	Expectation	Action	Observation	
	"The faster I set this up, the faster it is done with"	" Will there be many steps to this? "	"The menu look alike, it's going faster now"	" It went faster than I thought!"	" I can tell my wife exactly the time I took it when she asks"	" I want to finish this chapter first"	" This will remind me and I will not forget"	"At least I remember how to do it from the setup"	"the list is long, I'm not sure which one it is, I can't see it well"	"It's shared automatically with my wife's calendar too"	" I really improved my consistency! I can print the table for my doctor."						
	Expects to have many information to enter	Minimal useful information	Prefers autofill but needs to make sure it's the right information	Many more screens to fill	Information is easy to find	Log medication with one tap when convenient.	Non intrusive reminder allows flexibility	Wants to update the information quickly but correctly to only have to do it once.	The doctor I see the most will be at the top of the list.	Calendar synced automatically	Generate the information simply when an appointment
